P R E F A C E

These statistics for the year 1972 of co-operative organisations affiliated to the International Co-operative Alliance are as up to date as possible but should nevertheless be treated with some caution. Most of the figures come from questionnaires sent to affiliated organisations but some come from correspondence, from Registrars and other governmental sources or from published sources such as the International Directory of Co-operative Organisations published by the International Labour Office. The use of some official figures means that some organisations may be included that are not actually affiliated to the International Co-operative Alliance; but the great bulk of the figures are from affiliate . Trade figures for 1972 have been converted into sterling at the rate at the end of that year. Figures for membership as a percentage of population are based on UN figures.

The statistics are for the years 1971 and 1972. Where up to date figures are not available older figures have been used so as to give as complete a picture as possible, and these have been marked with an asterisk. In some cases figures are given for the later year but not for the earlier one and this means that the total percentage increases by continents will be misleading. Some percentage increases would be particularly misleading and have been omitted. The large increase in total turnover is to some extent a reflection of inflation.

Wholesale and Federal Consumers' Co-operatives

The trade of wholesale and federal consumer co-operatives has been consolidated in one table for the first time. In most European consumer co-operative movements there is one large wholesale society but in some there are also a number of other federal organisations. In some cases only one figure has been supplied for the turnover of consumer and agricultural co-operatives so that the sales of any federal or secondary societies are consolidated with those of retail or primary societies as is done with workers' productive, fishery and miscellaneous societies where no figures for the trade of federal or wholesale societies are given.

Problems of classification inevitably arise with multipurpose societies. Societies that are primarily agricultural co-operatives may at the same time provide domestic supplies for their members in the same way as consumer co-operatives and may at the same time be credit co-operatives or undertake other activities. Where there are such multipurpose societies the members are only counted once. The members of Japanese agricultural co-operatives, for example, are regarded as members of agricultural co-operatives rather than as members of credit co-operatives while members of societies affiliated to the Samband in Iceland are regarded as members of consumer co-operatives rather than as members of agricultural or fishery co-operatives.

On the other hand when farmers are members of several specialised agricultural co-operatives they are counted as members as all of them. The substantial increase in the number of members of French agricultural co-operatives reflects this membership of more than one co-operative, including service co-operatives. In Japan there is a fall in the number of members of the consumer co-operatives because five million of the members shown for the previous year are members for insurance purposes only and not customers in the co-operative store where sales are by law to members only; and the number of members of fishery co-operatives is reduced because some of the Japanese fishery co-operatives are not affiliated to the ICA. In France the accounting methods of the Société Générale des Coopératives de Consommation were changed between 1971 and 1972 and in Austria the sales of the Forum shops are included in the sales of retail societies and not in the sales of federated societies. In the United States the increased trade of the federal agricultural co-operatives is the result of better information on the proportion of the trade of marketing and supply co-operatives undertaken by federal societies.

Some figures for the cost of house construction by housing co-operatives are given; but they are not included in the total trade figures. In a few cases, such as housing co-operatives in Finland, figures for the number of societies are given but not figures for the number of members. Figures for the Fiji Co-operative movement in 1972 are given but not those for 1971. Some important co-operative movements are excluded because they are not affiliated so the statistics show no agricultural co-operatives in Holland or Belgium or Norway. It may be that the total number of members of co-operatives not affiliated to the ICA and outside China is somewhere around 29 millions making the total number of co-operators outside China around about 350 millions.

4.

The trade and membership statistics of co-operatives are in some cases approximations based upon the latest information received. Trade figures are particularly misleading in inflationary times and it is hoped next year to include some market share figures.
