FOREWORD

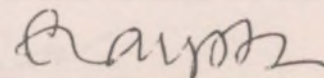

The present volume of "Indian Cooperative Movement - A Profile" is the 7th edition of this professional publication. This volume presents a comprehensive overall view of the dimensions and growth of various segments of Cooperative Movement in India. It also covers comparative agriculture development scenario in India and some of the Asian countries.

In this period of advanced electronic revolution with greater and greater emphasis on assimilation of various components of information technology including internet, website and e-commerce in various business functions, the present volume incorporates the requisite information and data having a bearing on various aspects of cooperative development. The availability of such crucial data is indispensable to the management in their decision making process and for managing their day to day affairs with efficiency and quickness.

It is known that in the present system of economic reforms which have been introduced since 1991, the cooperatives have been playing a balancing role between public and private sectors in carrying out various socio-economic developmental activities and in bringing about transformation in the rural set up of our country. Over a period of years, the Cooperative Movement have built up a strong niche in various segments of Indian Economy and has developed a strong network of 5.01 lakh cooperative societies spread from village to the national levels. In the context of privatisation, liberalisation and integration of Indian markets globally along with opening of agriculture trade under WTO Provisions, the cooperatives have to develop their functional efficiency through promotion of management excellence, strengthening their financial resource base, controlling their transaction costs and in this process will have to pave the way for earning a desirable rate of return on the capital employed. In order to built up such a cooperative set-up, the cooperatives have to devise and visualise innovative systems of functioning, improving their work culture, increasing per worker productivity to attain greater heights in the years to come. In the context of greater emphasis on food security being one of the objectives of agriculture planning, the cooperatives will have to streamline their mechanism of supply of critical agriculture inputs to the farming community adequately and in time for helping the Indian Economy to sustain higher annual growth rates of 7-8%. The entire Cooperative Movement will have to gear itself to attain the objectives and goals before Cooperative Movement which, interalia, involve development of cooperatives based on their autonomous functioning and through pursuing the cooperative value system of self-reliance and dedication to the interest of members.

The present profile is an important step in building up data network to face the future vision of competitive and market driven economy. I am sure that the various cooperative organisations at the national and state levels would similarly make serious efforts to develop a coordinated data network with NCDB of NCUI taking a lead in this direction.

I thank Mr. K.L. Nalwaya, Executive Director and his colleagues in the National Cooperative Data Bank for their sincere efforts and hard work in bringing out this publication in time.

PREFACE

We have just stepped into the new Millennium. The people around the world are projecting high expectations and hopes on the basis of on-going high tech IT. The general opinion is that with the open-up of high tech information technology, a lots of new avenues will emerged and generate creativity in work. This may lead to the prosperity of mankind in developing better understanding, explore transparent & fair trade practices and peaceful co-existence of brotherhood. It is a fact that the high tech IT will bring changes into the system but to manage the system, it is more important for the man to run the system and ensure the regular inputs. Hence for effective use of the system, the man has to play a significant role particularly in identifying the areas, agencies to ensure the regular data, what are the level and the extent of monitoring are required, selection of system and use of communication network and finally the linkage of network to take the final out put. This could be ensured only with the combined coordination and network of man, machine and IT.

In the new millennium, most of the trade and commerce will be managed and maintained through electronic medium, the cooperatives too can not look back from this fact. In this hour of high tech e-commerce and trade. I have pleasure to present the "Seventh Series of Indian Cooperative Movement – A Profile and first of this Millennium" which could be use as a model for other cooperative organisations for managing and maintaining their activities through the use of IT. Moreover, in this hour of globalised competition, the cooperatives should come forward to incorporate the IT as essential component as like other important activities.

We have tried to accommodate maximum and latest information about cooperative development in India as well as agricultural development of other countries to provide a comparative pictures of development for healthy interaction. The broad areas of information covered are growth and development of Indian cooperatives, current status of credit and non-credit cooperatives and trends of development beside comparative picture of agricultural development, use of inputs, commodities wise agricultural production and import and export of agrl. produce of Asian countries. These information will also be made available to NCUI website shortly for widely use and better interaction. As the information has attained top priority substance for right kind of planning, implementation and monitoring of programmes. Keeping this in mind and also the requirements of scholars, policy makers and planners of cooperatives, We have tried to incorporate many new areas such as Cooperative Hospital, Transport cooperatives, International agricultural development, a brief about the national level cooperatives (role, management and future areas of their programmes) and statewide status of credit cooperatives and business performance..

I sincerely thanks to all the member organisations of NCUI, Regional Directors/ Principals and faculty members of Institutes of Cooperative Management for their timely furnishing the requisite information which have helped to bring out this Profile on time. I am confident for their similar cooperation in future too. I also thank to my colleagues of NCUI for their active support.

I am grateful to Dr. S.S. Sisodia President and Shri. Dr. R.V.Misra, Chief Executive, NCUI for their encouragement in bringing out this publication.

International Co-operative Alliance

STATEMENT ON THE CO-OPERATIVE IDENTITY

Definition

A co-operative is an autonomous association of persons united voluntarily to meet their common economic, social, and cultural needs and aspirations through a jointly-owned and democratically-controlled enterprise.

Values

Co-operatives are based on the values of self-help, self-responsibility, democracy, equality, equity and solidarity. In the tradition of their founders, co-operative members believe in the ethical values of honesty, openness, social responsibility and caring for others.

Principles

The co-operative principles are guidelines by which co-operatives put their values into practice.

1st Principle: Voluntary and Open Membership

Co-operatives are voluntary organisations, open to all persons able to use their services and willing to accept the responsibilities of membership, without gender, social, racial, political or religious discrimination.

2nd Principle: Democratic Member Control

Co-operatives are democratic organisations controlled by their members, who actively participate in setting their policies and making decisions. Men and women serving as elected representatives are accountable to the membership. In primary co-operatives members have equal voting rights (one member, one vote) and co-operatives at other levels are also organised in a democratic manner.

3rd Principle: Member Economic Participation

Members contribute equitably to, and democratically control, the capital of their co-operative. At least part of that capital is usually the common property of the co-operative. Members usually receive limited compensation, if any, on capital subscribed as a condition of membership. Members allocate surpluses for any or all of the following purposes: developing their co-operative, possibly by setting up reserves, part of which at least would be indivisible; benefiting members in proportion to their transactions with the co-operative; and supporting other activities approved by the membership.

4th Principle: Autonomy and Independence

Co-operatives are autonomous, self-help organisations controlled by their members. If they enter into agreements with other organisations, including governments, or raise capital from external sources, they do so on terms that ensure democratic control by their members and maintain their co-operative autonomy.

5th Principle: Education, Training and Information

Co-operatives provide education and training for their members, elected representatives, managers, and employees so they can contribute effectively to the development of their co-operatives. They inform the general public, particularly young people and opinion leaders, about the nature and benefits of co-operation.

6th Principle: Co-operation among Co-operatives

Co-operatives serve their members most effectively and strengthen the co-operative movement by working together through local, national, regional and international structures.

7th Principle: Concern for Community

Co-operatives work for the sustainable development of their communities through policies approved by their members.
